For Grown-Ups: How to Use These Worksheets

For first and second grade. Each activity has two pages, the same facts in a new order.

Why use it

Subtracting within 20 is first and second grade work. The facts that cross ten, such as 13 – 5, are the hardest, because there are not enough ones to take away. Schools teach thinking of addition first: 13 – 5 is 8 because 5 + 8 = 13. Those facts have their own pages here.

What it is good for

- A teen number take away ones, such as 17 – 4, without crossing ten.
- Facts that cross ten, such as 12 – 7.
- The missing number, at the start or in the middle.

How to use it

1. Start with pages 1 and 2: take the ones away, and the ten stays.
2. On pages 3 and 4, ask for the addition fact: what goes with 7 to make 12?
3. Counting up from the smaller number is a good way too.
4. On the missing number pages, a box at the start is the number your child began with.
5. Check with the answer key. Each red number sits where your child writes it.

> **Try saying:** “12 take away 7. What do you add to 7 to make 12?”

Tip: Take from ten works well here: 13 – 5 is 10 – 5, which is 5, and 3 more is 8.
