For Grown-Ups: How to Use These Worksheets

One page at a sitting, after the Coin Values sheet. For first grade.

Why use it

Knowing a coin's value means knowing that size does not tell you the answer (TEKS 1.4(A) and (B)). Every page has a dime beside a bigger penny or nickel, where the smaller coin is worth more, so your child has to read the name and think about the value. Comparing values is also comparing numbers: 10 is more than 5.

What it is good for

- Comparing two coins by their value.
- Noticing that the dime is small but worth more than a penny or a nickel.
- Saying which number of cents is greater.

How to use it

1. Read the two names in a pair together.
2. Your child says what each coin is worth.
3. Your child circles the coin that is worth more.
4. On a dime pair, ask whether the bigger coin won.
5. Check with the answer key, where the coin worth more is ringed in red.

> **Try saying:** “Which is worth more, 10 cents or 5 cents?”

Tip: If your child circles the bigger coin every time, set out a real dime and a real nickel and trade one for the other.
