# Make a Clock

Cut out the clock along the outer circle. Glue it to card or a paper plate.

# Make a Clock: The Hands

Cut out the hands. Make a small hole at each cross for a paper fastener.

# For Grown-Ups: How to Use These Pieces

About 20 minutes to make, with scissors, glue, card or a paper plate, and one paper fastener.

## Why use it

A clock your child can turn helps them see the hands move together, which is hard to see on a picture. The minutes are printed by 5s around the rim, so it works from the hour and half hour in first grade to 5 minutes in second grade.

## What it is good for

- Showing a time and moving the hands to the next one.
- Seeing that the short hand moves as the long hand goes round.
- A set my clock game at the table.

## How to use it

1. Cut out the face on the outer circle and glue it to card or a paper plate.
2. Cut out one hour hand and one minute hand. The spares are for later.
3. Make a small hole at each cross, push a paper fastener through both hands and the face, and open it at the back.
4. These hands are not joined, so move the short hand along a little as the long hand goes round.
5. Play set my clock: you say a time, your child sets it, then swap.

> **Try saying:** “Set it to 3:00. Now go to half past. Did the short hand move?”

**Tip:** A grown-up should make the hole with a pencil point into a lump of play dough behind the card.
